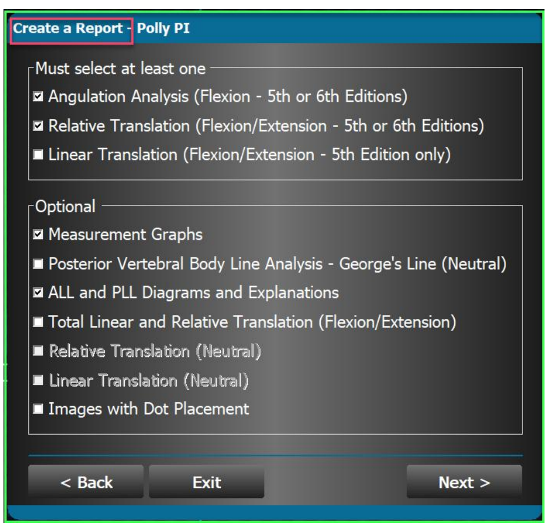
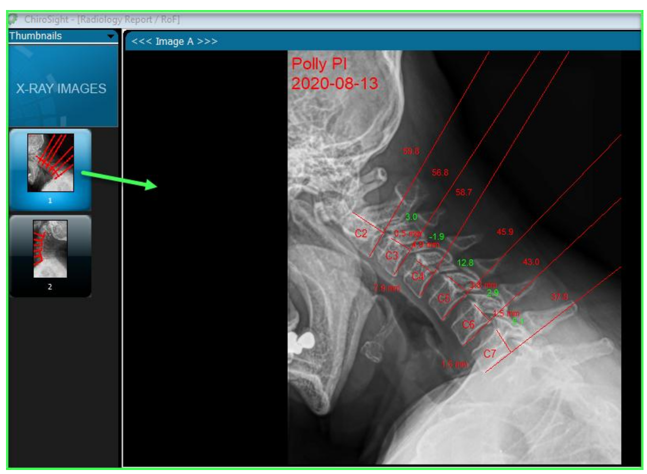
Creating and Editing Impression Macros

The AOMSI report comes with prebuilt impression macros that you can utilize or edit. You also have the option to create your own.

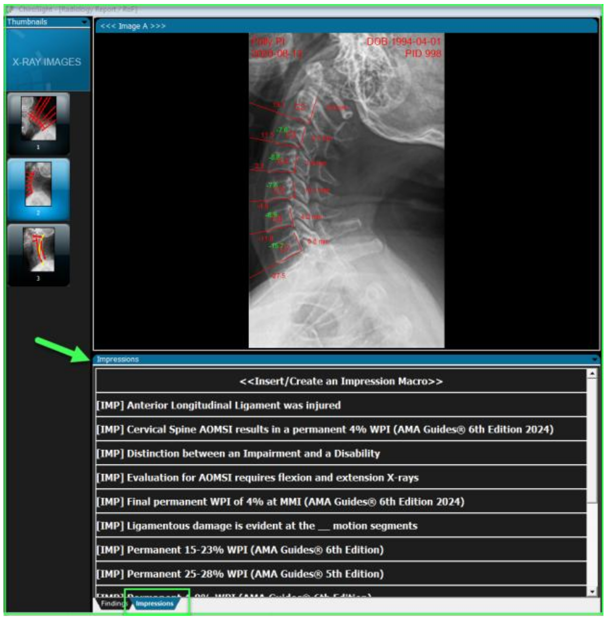
All macros on the AOMSI Impressions tab are <u>centralized</u>. You will have access to them when you create an AOMSI report on any PC that has our software installed.

On the **Impressions** tab in your AOMSI report, for the prebuilt impressions to appear, the image needs to be included in the report based on the option(s) selected on the Create a Report screen, and an image is selected in the thumbnail.



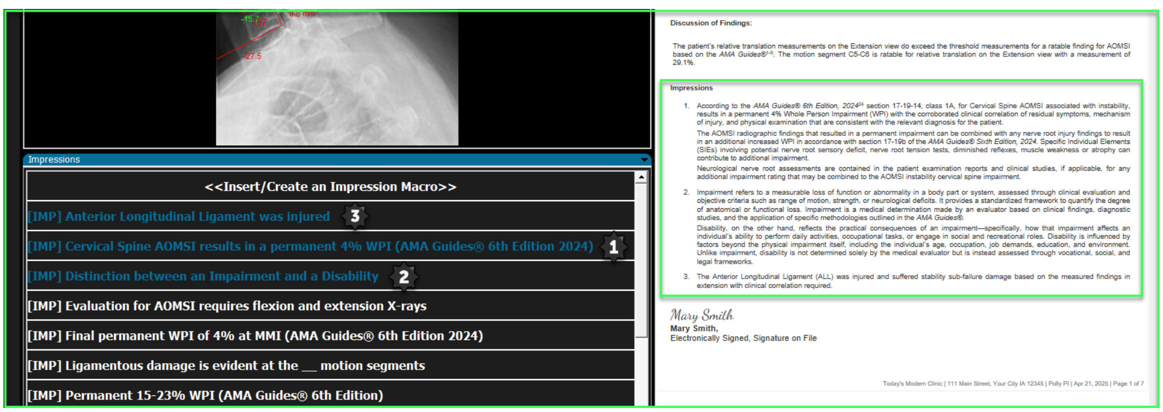


The Impressions tab will populate in alphabetic order with the prebuilt impressions *<u>if the criteria on the drawn Advanced Line Analysis outcomes are met for that specific impression</u>*.



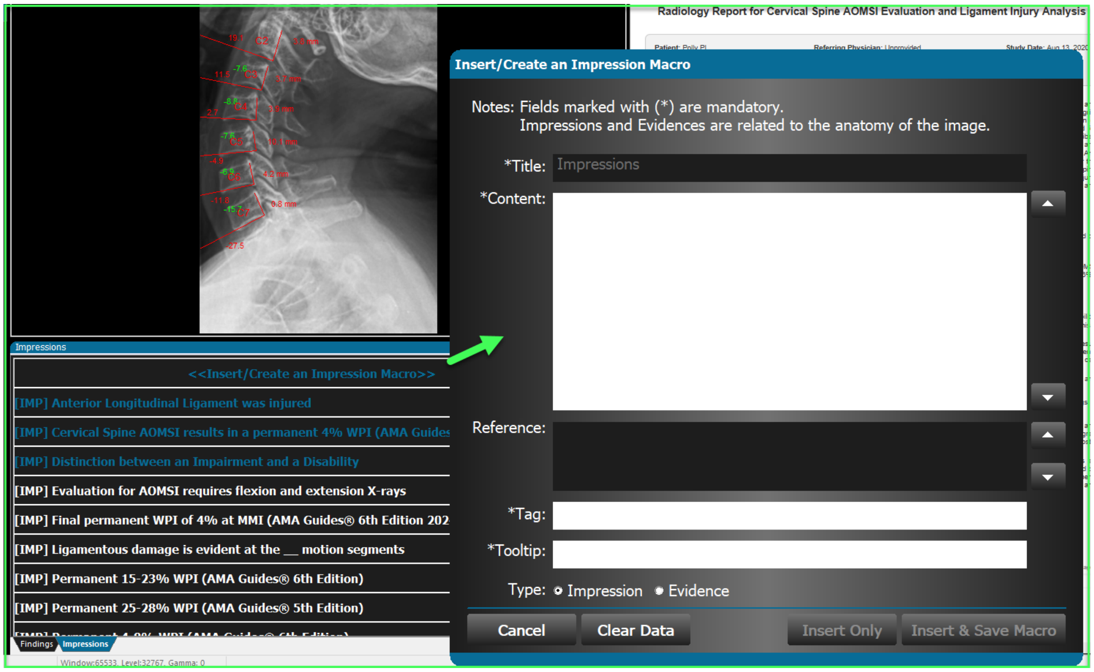
Select the white text to add the impression to the report. They will be added to the report in the order you select them. Once they are added, the text turns blue.

To remove an impression from the report, click on the blue text.



Creating a Macro

To create your own impression, select **<<Insert/Create an Impression Macro>>** at the top of the Impressions tab.



Title – This is the title of the section on the report, defaults to Impressions.

Content – This is the body of the impression you are creating. It appears on the report below the Impressions title; in the order the macro is added to the report. Max characters allowed are 4000.

Reference – This field is only active when you are creating a Standard report in the software.

Tag – The Tag is what you will see to select a previously created macro. It appears on the Impressions tab when saved. It automatically populates with what you enter in the Content box, with ability to edit. Max characters allowed are 50.

Tooltip – Appears when you hover on the Tag. Used to provide additional information for the Impression. It automatically populates with what you enter in the Content box, with ability to edit. Max characters allowed are 50.

Type – This defaults to Impression. The Evidence macro is available on the software's Standard report.

Cancel – Will close the Insert/Create Impression Macro screen without saving.

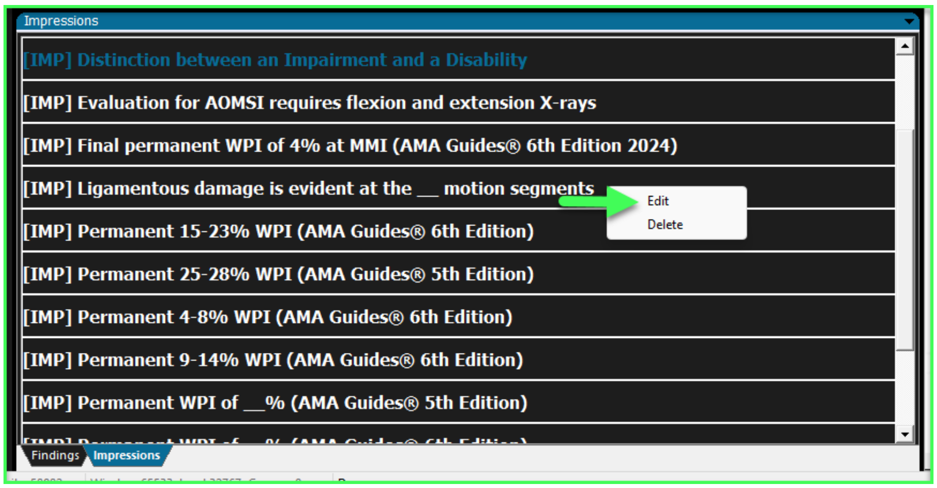
Clear Data – Clears the data from all boxes to start over.

Insert – Uses the macro you created for <u>just this report</u>. It does not save it for future reports. You do have the ability to edit that macro **prior** to exiting the report.

Insert & Save – Uses the macro you just created for the current report and saves it on Impressions tab to use in future reports for that view.

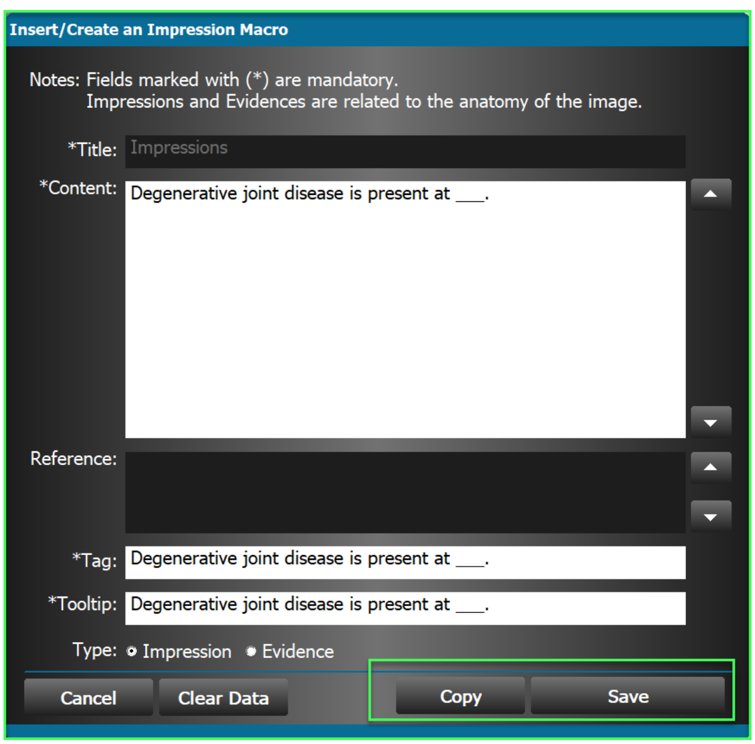
Editing or Deleting a Macro

To Edit or Delete an Impression macro, the macro cannot be on the report. If it is, click on the blue text to remove it from the report, then right-click on the white text and select the desired action from the menu.

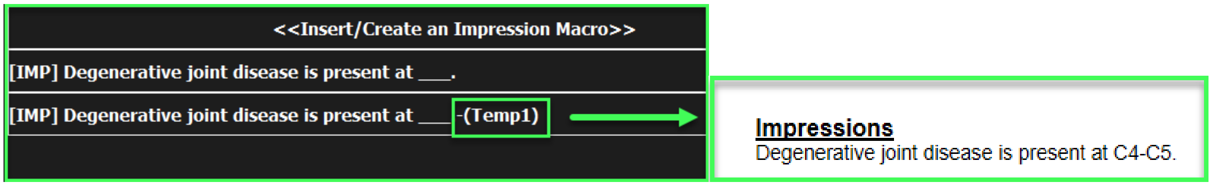


Delete – Will delete the macro from the Impressions tab.

When you **Edit**, you have the option to Copy or Save.



Copy – Allows you to customize the macro for that report instance and creates a temporary macro. The tag will have (Temp1) at the end of it as the first template. When you exit that report, the temporary macro is <u>not</u> saved on the Impressions tab. The original macro will remain. You can only copy an original macro, not a temporary one.



Save – Allows you to edit the contents of that macro and save it, <u>replacing</u> the original contents.
